Introduction of the game

This is a game aiming at obtaining high scores and challenging the more difficult level. There are seven magic stones with different color and shape, and you can change the location of the near stone. The three stones or more than three ones in one line will disappear and you will score. Along with your scores increasing, you will enter the grounds of more difficult level and to accept the more difficult challenge.

Game interface

1. Cover:

After choosing to enter into the game, the following picture will appear, and players only need to press any key to enter the game.

2. The main menu:

Enter the main menu, and you can choose Play Game, Options, Top 10 and Exit by pushing the navigation key up and down and press it to enter the lower level menu or exit.

3. Setting:

In the sound setting, you can regulate the sound of 10 levels at your will. In this interface, pushing navigation key leftward or rightward to adjust

the volume, and press the left or right option key to return the main menu.

4. Top ten:

Enter it and you will see the Top 10 in the previous record. If your point is higher than any of them, your name will appear in it. You can press any key to return to the main menu.

The interface of game

When you enter the game, you will see a chessboard filled with magic mine. There is an experience groove in the downward of the board. You should change the stones ceaselessly in order to make the same stone rank one line. If the three or more near stones with the same color and shape is ranked one line, the stones will disappear and you can get the corresponding points and your experience value will also increase. When the experience groove is full to get to the right end, congratulations! You have succeeded in this ground and you can challenge the more difficult ones.

Operations

a) **Change the stones**

Move the cursor of finger shape to the stones that you want to change, push the navigation key downward. Then transfers to another stone, again push the navigation key. OK, the two stones will change their locations.

b) **Obtain the clues**

If you actually can't find the stones that can be ranked into one line, press left option key. The game will hint you which stone should be changed to line with the other same stones. However, each time you make use of the clue, you will be deducted the corresponding points.

c) **Exit**

If you want to exit, you can press right option key. Then a confirming frame will spring out. Press left option key and you will exit.

The clew to the game

If the game comes to the sixth ground, there will be a time limitation. The points you get when changing the stones will lengthen the time limitation. So you should change the stones as fast as you can to make the experience groove reach the right end soon.

The more same stones that are ranked into one line, the more point you will get. If the newly-built stones after you changed can rank with other same stones into one line, your points will be doubled.

The questions and answers to the game

The game is made up of two files. One is the SIS installment file and the other is the explanation file. It is hoped that you read this explanation before installing software. Of course you are reading now. And SIS installment file refer to Nokia mobile phone menu how to install software please.

1. Obtaining the software register number

Firstly it is announced that the software of genuine edition require paying. So if you want to buy this software, please enter the web site of Digital-Red (<http://www.worldup.com/shopping/>) and choose Buy on the page of Product. After you have put forward IMEI number and succeeded in paying online, Digital-Red will build software register number according to it, which can only be used on your own device. (Please keep this register number carefully, for when upgrading software or your device appear unconventionality and should install software again, you will need it once more.)

2. Installing software

The software is a SIS standard file. You can install it into your device through PC, and also you can upload the file to your 7650/3650 devices and install it in File Management. After installing, there will be a game icon on Other desktop, which means you have succeeded in installing software. However, you can begin the game right now. The software will remind you of entering into software register number, which we have stated in the last item, please refer to it.

3. Obtaining IMEI number of your device

There is an IMEI number for 7650/3650 and you can get it in two ways: software or seeing it directly.

Obtaining by software: you can enter into *#06# on the phone interface and there will be your device's IMEI number on the screen.

Obtaining by seeing directly: on the back of the device, take down the battery and you will see a silver label. The upper bar code and number on it is just your IMEI number and don't record the "/" in bar code.

4. Obtaining upgrade edition

We will upgrade the software so that the game will become more stable and interesting.

After buy our software, we will Email to you termly to remind you of upgrading software.

The upgrade edition will include two kinds: free and charge. The free edition is just cover the origin software directly (when running, you should enter into the origin register number. So it is hoped to keep you software register number properly).

5. Losing the software register number

If your software register number is lost, you can Email us to inquire about your register number. Of course, you should refer the software name you purchased, the edition, the IMEI number and your personal information when buying. We will compare these information with those in our data base and if they are identical absolutely, we will send you your lost register number by Email.

6. Other unknown problems

In the progress of using software, if you fall across the problems we have never encountered, we hope sincerely that you feed back to Digital-Red so that we can modify it accordingly. Of course, due to the limitation of location, we are unable to service and debug for you face to face. Therefore it is expected that you tell us the detail information about the conditions and environment when the problem occurs. By this means we can recur the problem. The problem referring table.

<http://www.worldup.com/support/SupportForm.htm>

7. Obtaining OS software edition of device

In order to judge your problem, there are two ways when referring software edition. One is software way: there is an option about this device in the Control Panel. Open it and the edition number of this product OS is just at the end of the file (seeing the picture). The other way is dialing *#0000# directly and get OS edition number.

8. Problems when running

EMS memory is not big enough: if it is hinted that space is not big enough when running, please close some opened and not used applications to spare part of space for software.

Calls and messages during the game: during the game, if EMS memory is enough, the calls will not affect running of the game. You can play the game during the calls or continue the game after the calls. However, even if the memory is not enough, the calls and messages will not be affected and the game will be interrupted

9. The requirement of system

Installing software, the space of 260K is required

The occupied EMS memory when running is less than 103K.
